Volume LV No. 1

FORT WORTH: 1950

TEXAS JANUARY 1950

E. A. Farrell, Section Director - Houston, Texas

WEATHER SUMMARY

The month was one of the warmest Januarys of record for the State as a whole. Temperatures averaged slightly above normal in the upper portion of the Red River Valley, but were considerably above normal elsewhere with greatest departures from normal in coastal and extreme southern portions of the State. Precipitation was below normal except in northeastern, east-central, and west-central areas.

A cold mass of air invaded the State on the 3rd, which brought severe temperatures to the northern half of Texas and sub-freezing temperatures as far south as San Antonio. Monthly minimum readings occurred at most stations on the 4th or 5th. The lowest temperature for the month was -8° at Dalhart Experiment Station on the 4th. Warmer weather followed the cold of the first week. Maximum temperatures were generally recorded from the 24th to 26th. The highest temperature for the month was 96° at Rio Grande City on the 25th. Precipitation occurred frequently in the eastern third of the State with most of it falling during the first half of the month. Elsewhere precipitation was light and scattered. Dry weather prevailed in the Panhandle and the extreme southern sections. Minor flooding occurred along the Sabine, Sulphur, Cypress, and Neches Rivers from heavy rains during the first week of the month. Heavy rains during the second and third weeks brought minor flooding along the Trinity River. The greatest precipitation in 24 hours was 3.80 inches at Honey Grove on the 31st. The greatest monthly precipitation was 14.78 inches at Chambers Hill Guard Station.

Small grains in Northwest Texas were badly in need of additional rain. Wheat was furnishing only limited grazing and supplementary feeding of livestock was necessary. Winter grains and cover crops in northern and central areas were not adversely affected by freezing weather and were generally benefitted by increased moisture received during the month. Oat fields for winter pasture in Central and South Texas were in excellent condition.

LOCAL STORMS

At 6 p.m. on the 26th a tornado destroyed a ranch house and uprooted trees, injuring two persons on the Puerto Rico Ranch about 35 miles north of Edinburgh, Hidalgo County. The amount of property damage was not estimated. A severe ice storm occurred in Northeast Texas from January 30th to February 1st. The glaze was not as extensive as the storm in January, 1949. Additional details will be given in the February notes. (CBC)

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nation-wide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state. Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the Post Office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin. Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated. Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 C.S.T.

-	No record in Tables 3, 4, 6,7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Station equipped with recording gage only.
SS	This entry in time of observation column in Station Index means "sunset".
T	Trace, an amount too small to measure.
V	Includes total for previous month.
Z	Hourly amounts from a recording gage at the same site may be found in Table 4.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, Room 9, U. S. Court House, Fort Worth 2, Texas.

DEC 14 1950

FEBRUARY 1950
Volume LV No. 2

FORT WORTH: 1950

TEXAS FEBRUARY 1950

E. A. Farrell, Section Director - Houston, Texas

WEATHER SUMMARY

Temperatures averaged above normal in all sections of the State and were much above normal in many areas including the coastal zone and the Panhandle. This was the fourth consecutive month with above normal temperatures, making the winter of 1949-50 one of the mildest of record in Texas. Precipitation was above normal in the northeastern, east-central, and central portions, and along the upper coast, but was below normal elsewhere.

Moderate flooding occurred in the Sulphur and Upper Trinity basins from heavy to excessive rains during the first week. Cold temperatures in the central and northern sections were followed by a slow climb to above normal temperatures near the end of the first week. Moderate temperatures prevailed during the second week, except in the Upper Red River Valley and the Panhandle. As the cold temperatures moved eastward, the heavy rains which resulted in East Texas produced moderate flooding in the Sabine, Sulphur, Cypress, Trinity, and Neches watersheds. Most of the precipitation was ended on the 13th, followed by clear skies, frosty mornings in the northern and central sections, and sunny days with moderate afternoon temperatures. Although most stations recorded minimum temperatures for the month on the 14th or 15th, the Panhandle experienced the coldest temperatures on the 1st, when 6° at Dalhart Experiment Station was the lowest in the State. Most stations recorded maximum temperatures for the month on either the 7th and 8th or on the 25th and 26th; however, the highest temperature for the State was 95° at Rio Grande City on the 12th. The greatest precipitation in 24 hours was 5.92 inches at Beaumont on the 13th. The greatest monthly precipitation was 13.55 inches at Goose Creek.

Farm activity was restricted over much of the State by cold weather, sleet, ice and rain during the first week. Field work was at a standstill over most of the eastern half of the State during the second week as a result of heavy rains. The northwest section continued dry, and wheat was critically needing moisture in that section. The non-irrigated commercial vegetable areas in south Texas received the first generous rain since December 19th. Spring field work started along the upper coast near the end of the third week. Preparation of land for spring planting made fair progress as soils dried over much of the State in the generally warm, open weather of the last half of the month. The High Plains wheat country continued dry at the end of the month. Livestock continued to hold up well over the entire State.

LOCAL STORMS

A severe ice storm occurred in Northeast Texas from January 30th to February 1st, ranging from Wichita Falls to Paris and as far south as Dallas and Fort Worth. Although not covering as extensive an area as the ice storm of January, 1949, this year's storm is considered by many to be more damaging than last year's. The worst damage seemed to be centered around Bonham and Fannin County. At least 54 cities were without telephone communications. Celeste, Muenster, and Leonard were cut off from water supplies on account of power failure. No estimate of damage is obtainable, and much of the damage was intangible. Severe damage occurred to trees in the area affected.

A series of tornadoes in East Texas occurred on February 11th and 12th generally moving from south to north or from southwest to northeast. Extensive damage was experienced with reports being received from the following communities:

Alvin - $50,000 damage, La Porte - $20,000, Chappell Hill Community (7 miles east of Tyler) - $100,000, Hughes Springs - $100,000, Corley - $40,000, Dublin - $20,000, Goesbeck - $25,000, Haslam - $205,000, Jericho and Fellowship Communities (near Center, Shelby County) - $51,500, Lake Lovell-La Belle area (15 miles WNW of Port Arthur) - $8,100, and Marietta - $2,000. (CBC)

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nation-wide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state. Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the Post Office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin. Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated. Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 C.S.T.

-	No record in Tables 3, 4, 6,7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Station equipped with recording gage only.
SS	This entry in time of observation column in Station Index means "sunset".
T	Trace, an amount too small to measure.
V	Includes total for previous month.
Z	Hourly amounts from a recording gage at the same site may be found in Table 4.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, Room 9, U. S. Court House, Fort Worth 2, Texas.

TEXAS

THE
DEC 14

MARCH 1950
Volume LV No. 3

KANSAS CITY: 1950

TEXAS - MARCH, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

The outstanding feature of March was the unusually dry weather which prevailed over most of the State, seriously accentuating the droughty conditions of previous months over western areas. Although precipitation has been above normal for the first three months of the year in the northeastern and north-central sections, elsewhere it has been very deficient, being as low as 34% of normal in the northwestern section. Temperatures for March averaged above normal in the Western Division and in extreme south Texas, but were below normal elsewhere.

Heavy rains fell in the Neches and lower Trinity River basins during the first four days of the month, which supplemented high water from February rainfall and prolonged flooding in those basins until about the middle of March. Precipitation during the month was mostly confined to the eastern third of the State during the first half of the month. Dry weather prevailed in the west and northwest portions of the State with strong, gusty winds and frequent dust storms. Precipitation averaged below normal in all divisions of the State. Temperatures were near the seasonal normal until the 12th when a change to colder moved across the State. Preceding the "norther", 100° was recorded at Rio Grande City on the 12th. Most stations recorded minimum temperatures for the month on the 13th, when Vega recorded 3°, the coldest for the State. Light frosts occurred in central Texas on the 20th. A low pressure area brought rising temperatures until the 26th, when most stations reported the maximum temperature for the month. The highest temperature for the State was 107° at Rio Grande City on the 26th.

Preparation of land and planting was slowed by dry surface soil conditions which have extended over practically the entire State except east Texas and some Upper Coastal counties. Dry winds continued to take the nearly depleted surface moisture in all areas. Dust storms, which at times cut visibility to one-half mile, continued to plague Plains farmers. However, in east Texas and Upper Coastal country east of Houston, soil preparation and planting made rapid progress, with near ideal soil moisture supplies. Wheat prospects in th High Plains showed continued deterioration, with the drought and dust storms becoming more intense. Corn and sorghum planting made fair progress. In south Texas, some corn was up to a stand, but lack of moisture was retarding growth. Some cotton was planted in central areas but most farmers were postponing planting until moisture is available. Freezing temperatures, which extended as far south as San Antonio on March 13, caused some damage to fruit and gardens. Peaches that were in full bloom were damaged, but most peaches had not reached full bloom stage in the northern half of the State and had only light to moderate bud damage. Harvest of onions, potatoes and sweet corn continued in the Lower Valley. Development of green feed was at a standstill in all areas excepting east Texas. Livestock, with some feeding, were just about holding thei own in the critically dry areas.

No severe storms were reported during the month.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rain fall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weathe Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbe within a state. Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the postoffice. Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin. Monthly and seasonal snowfall for the preceding 12 mon will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown. Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time. Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830.

-	No record in Tables 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Station equipped with recording gage only.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
Z	Hourly amounts from a recording gage at the same site may be found in Table 4.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 811 Fidelity Building, Kansas City 6, Missouri.

CLIMATOLOGICAL DATA

TEXAS

DEC 14

APRIL 1950
Volume LV No. 4

KANSAS CITY: 1950

TEXAS - APRIL, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during April averaged 2 to 3° above normal in the extreme west, extreme south, and the Panhandle, and were 1 to 2° below normal in the north-central, south-central, northeast, and upper coastal areas. Elsewhere temperatures were seasonable. Although rains occurred in all sections of the State during the month, amounts in the western and extreme southern areas averaged less than normal with the moisture situation continuing critical in these areas. Rainfall was abundant elsewhere over the State, averaging considerably above normal in some sections, particularly along the upper coast.

The first few days of the month brought showers in east and east-central areas but dust storms in the northwest. Most stations observed the highest temperature for the month on the 3rd. Cold air moved into the State on the 4th bringing the lowest temperature for the month to most stations on the 5th, when the lowest for the State occurred at Miami, which recorded 21°. The change to cooler temperatures brought a few showers in the eastern quarter of the State, but dust still prevailed in the west and northwest sections. A marked change from the dry weather pattern began on the 13th. Heavy to excessive rains fell in the Trinity and Sabine water sheds from the 13th to 20th which resulted in minor flooding in the upper portions of those basins. Excessive rains occurred along the upper coast on the 22nd and 23rd and in the northeastern third and lower Trinity basin on the 29th. The highest temperature for the State occurred at Rio Grande City on the 29th, when 107° was observed. The greatest precipitation in 24 hours occurred at the Dupont substation in Orange on the 29th, when 8.05 inches was measured. The Dupont substation in Orange also had the greatest monthly precipitation for the State, which was 13.18 inches.

Dry soil over all of the State excepting east Texas during the first half of the month continued to hold growt of crops, planting and soil preparation at a near standstill. Prospects for the 1950 crop season were greatly improved by the drought-breaking rains over most of the State during the third week. Planting and replanting of corn, sorghums and cotton made fair to good progress as soils dried during the last week. Rains were inadequate in much of the northern High Plains, western counties of the southern High Plains, the Trans-Pecos area and counties along the Rio Grande.

LOCAL STORMS

A small hailstorm at Robstown, Nueces County, on the 23rd destroyed $500 worth of cotton, which must be replanted. On the 28th at Abilene, Taylor County, a hailstorm left $100,000 damage to house roofs, cars and neon signs. Also on the 28th, at Clyde, Callahan County, a tornado and hailstorm destroyed property valued a $58,800; hail damage to crops was estimated at $15,000. At Comanche, Comanche County, on the 29th a tornado and hailstorm destroyed $3,000 worth of crops and did $60,000 damage to other property. Hail damage was estimated at $600 and tornado damage at $62,400 for the Comanche storm. The path was through many ranches and dairy farms where there were very few crops, but many livestock.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin Series, data from Hydroclimatic Network Stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal Agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers w in a state. Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the postoffice. Observation s given in the Station Index are in local standard time.

D yed data and corrections will be carried only in the June and December issues of this bulletin. Monthly and seasonal snowfall for the preceding 12 months w be carried in the June issue of this bulletin.

ions appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

ss otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in s. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

t and hail were included in snowfall averages in Table 1, beginning with July 1948.

nts in Table 4 are from recording gages. Traces are not shown. Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time. Snow round in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830.

- No record in Tables 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
• Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR This entry in time of observation column in Station Index means after rain.
3 Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record.
R Station equipped with recording gage only.
T Trace, an amount too small to measure.
V Includes total for previous month.
Z Hourly amounts from a recording gage at the same site may be found in Table 4.
SS This entry in time of observation column in Station Index means observation made near sunset.

Sc ription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and mo orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 811 Fidelity Building, Kansas City 6, Missouri.

W.B.O., Kansas City, Mo. -- 6-20-50 -- 1940

TEXAS

DEC 14 1950

MAY 1950
Volume LV No. 5

KANSAS CITY: 1950

TEXAS - MAY, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during May averaged considerably above normal and rainfall below normal in coastal, south-central, extreme western and extreme northwestern portions of the State while elsewhere temperatures were near normal and rainfall above normal. For the State as a whole, both temperatures and precipitation were near normal.

Cool polar air predominated over most of the State at the beginning of the month with attendant heavy to excessive rains in the eastern and central divisions and light precipitation in the western division. Most stations recorded the lowest temperature for the month on the 1st, when the lowest for the State occurred at Follett with a reading of 30°. The excessive rains in eastern Texas on the 1st and 2nd caused minor flooding in the upper Trinity and Sabine watersheds. Flooding already prevailed in the lower portions of those streams. Temperatures rose rapidly after the 2nd until the highest temperature for the State of 105° was recorded at Laredo on the 4th. Dry, warm, growing weather prevailed until the 9th. Scattered showers occurred over most of the cropland areas of the State the balance of the month with heavy rains from the 10th to 14th in the upper Sabine and Trinity basins causing prolonged flooding in the lower basins for most of the month. Most stations recorded the highest temperature for the month on the 19th. The greatest monthly amount of precipitation was 13.16 inches at Maud. The greatest precipitation in 24 hours was 5.80 inches at Chambers on the 2nd.

Planting, re-planting, and cultivation made good progress in central and upper coastal counties in the open weather of the first week. Practically all areas east of the Low Plains now urgently need open weather to permit cultivation of growing crops as well as completion of planting. Several days of open weather during the last week in the eastern and coastal counties benefited growing crops and permitted much needed field work. Flax harvest was nearing completion in south-central Texas. Good progress was made in practically all commercial vegetable areas.

LOCAL STORMS

A windstorm and hail at Henderson, Rusk County, on the 2nd, damaged crops to the extent of $5,000. On the 4th, a windstorm damaged $17,500 worth of crops and $15,000 worth of other property at El Paso. A tornado with light hail at Perryton, Ochiltree County, on the 4th left $80,000 damaged property in its wake. Property was damaged by wind and hail at Lamesa, Dawson County, to the extent of $50,000 on the 10th with hail accounting for $2,500 of the damage. Three windstorms with hail occurred on the 13th with $55,000 damage at Rotan, $5,000 at Truby and $250,000 at Abilene. On the 14th, wind and hail left combined damage of $250,000 near Sarita and Riveria in the Baffin Bay area. A tornado at Fresno, Fort Bend County, also on the 14th, left $1,000 damage to farm buildings. Wind and hail at Sulphur Springs, Hopkins County, on the 14th caused $3,300 damage. On the 15th, a tornado with light hail left $50,000 of damage at Boerne, Kendall County. At Temple, Bell County, on the 17th, a windstorm and hailstorm with hail drifts 2 or 3 feet deep left damage amounting to $201,000. Wind and hail in Fannin County on the 19th accounted for $50,000 damage at Honey Grove and $2,000 at Windom. Also on the 19th, in Navarro County, hail and wind left $6,000 damage at Rice and $500 at Chatfield. Hail on the 20th at Clifton, Bosque County, left an unknown amount of damage, but stripped 30,000 acres of farmland. Also on the 20th, wind and hail left $12,000 damage at Dodd City, Fannin County and $200,000 damage at Kerens, Navarro County. At Lamesa, Dawson County, a tornado damaged $5,000 of property on the 25th. Wind and hail on the 27th left $335,000 damage at Borger, Hutchinson County. On the 29th a tornado was observed at Pilot Point, Denton County, but the amount of damage was not estimated. Wind and lightning at Fort Worth, Tarrant County, on the 29th, damaged $1,500 worth of property. Also on the same day, $1,500 damage resulted from wind and hail at Dallas. The worst of the windstorm and hail on the 29th was centered at Greenville, Hunt County, where damage was estimated at $2,000,000 with damage to automobiles and many buildings, barns, garages, and warehouses completely destroyed. Four people, becoming entangled in live wires which had been blown down, died of electrocution.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages -- mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin Series, data from Hydroclimatic Network Stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal Agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state. Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the postoffice. Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin. Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown. Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time. Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830.

- \- No record in Tables 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- 6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
- AR This entry in time of observation column in Station Index means after rain.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record.
- R Station equipped with recording gage only.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- Z Hourly amounts from a recording gage at the same site may be found in Table 4.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 811 Fidelity Building, Kansas City 6, Missouri.

W.B.O., Kansas City, Mo. -- 7-24-50 -- 1940

JUNE 1950
Volume LV No. 6

KANSAS CITY: 1950

TEXAS - JUNE, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during June averaged slightly below normal over central, west-central, and southwestern portions of the State, but were mostly normal to above elsewhere. Rainfall was above normal in the Panhandle, the extreme northeastern and extreme southern portions of the State and near the upper coast with excessive rains near the upper coast on June 2nd-3rd.

Cool polar air predominated over most of the State for the first six days with attendant heavy to excessive rains. The lowest temperature for the month was 42° at Miami on the 1st and 4th. Most stations recorded their monthly minima from the 4th to 6th. The greatest precipitation for 24 hours occurred at Galveston Airport, and was 14.17 inches on the 2nd-3rd. Significant showers occurred in most sections, except the extreme south, during the second week. The upward trend of temperatures began on the 9th. During the third week, general showers occurred in the Panhandle, but fair weather prevailed elsewhere. Most stations recorded their monthly maxima from the 24th to 29th. The highest temperature for the month was 108° at Matador on the 24th. Another shower period occurred from the 28th to 30th. The greatest monthly precipitation was 20.57 inches at Galveston Airport.

Except for the first week when torrential rains caused local flooding in central and eastern sections of the State, field work made good progress during the month. Harvest of wheat was underway in the northwest, and of grain sorghums in the south. Corn continued good development and early fields were nearing maturity. Cotton made good progress with harvest underway in the Lower Valley, and crops fruiting heavily over south Texas. Harvest of tomatoes was limited mainly to central and eastern counties. The east Texas potato crop and the north Texas onion crop were harvested. Ranges and pastures continued supplying green feed over most of the State.

LOCAL STORMS

Lamesa, Dawson County, suffered damage of $50,000 to crops from wind and hail on the 4th. On the 5th, a series of tornadoes, hailstorms, and windstorms left damage in a number of communities, as follows: Mertzon, $1,000; Ross, $1,000; Pattison, $5,500; Brenham, $555,000; Kenney, $1,995,000; Poteet, $20,000; and Hallettsville, $5,750. On the 19th, a tornado and hailstorm occurred about five miles south of Dalhart with an unknown amount of damage; on the same date, a hailstorm left $500 damage at Amarillo. High wind damaged $15,000 worth of property at Lamesa on the 20th. Lightning struck a tree in Marshall, under which seven persons took refuge on the 21st; as a result, four persons were killed and one injured. An unknown amount of damage accompanied high wind and hail at Silverton on the 21st.

FLOODS

Local flooding occurred at Brownsville as a result of 7.52 inches of rain on the 2nd. More than 14 inches of rain fell at Galveston on the 2nd-3rd, with an unofficial measurement of 17.30 inches at the Lazy S Ranch on Galveston Island. The drainage system was inadequate for the accumulated precipitation. The business district and the greater portion of the residential areas of Galveston were flooded to a depth of one to four feet of water. As a result of heavy May rains, which were supplemented by excessive rains during the first three days of June, moderate flooding occurred in the lower Sabine and lower Trinity watersheds. Moderate flooding also occurred in the Guadalupe basin the first week from heavy to excessive rains from the 1st to 3rd. There were slight overflows in the Neches basin and along the East Fork of the Trinity.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

Buna, Lat. 30° 26' Long. 93° 53'. Rain began 3 p.m. 1st; ended dna 3rd. Measured in standard 8" rain gage. Exposure good. Total 6.4

Burkeville, Lat. 31° 00' Long. 95° 40'. Rain began 6 p.m. 2nd; ended 7 a.m. 3rd. Measured in 8" tub, ran over and 10 qt. bucket. Exposure good. Total 6.2+

Burkeville, Lat. 31° 04' Long. 93° 31'. Rain began on 2nd and ended 3rd. Measured in 16 ft. boat; 16" deep x 6" slope. Exposure good. Total 11.0

Chireno, Lat. 31° 29' Long. 94° 22'. Rained on 1st, 2nd, and 3rd. Measured in straight bucket. Total 3.5

Deweyville, Lat. 30° 18' Long. 93° 45'. Rain began p.m. 2nd; ended a.m. 3rd. Measured in a container 6 1/2" deep x 14" wide x straight diameter, ran over. Exposure good. Total 6.5+

Deweyville, Lat. 30° 20' Long. 93° 49'. Rain began on 2nd; ended 3rd. Measured in tub, 10 1/2" deep - dents estimated. Exposure good. Total 8.0

Galveston, Lat. 29° 09' Long. 95° 03'. Rain began 7 p.m. 2nd; ended 11 a.m. 3rd. Measured in oil drum, irregular, diameter 10" x 10 1/4" deep. Exposure fair, about 45° from roof of building. Doubt that catch was affected much, if any. Total 10.0+

Galveston, Lat. 29° 12' Long. 94° 57'. Rain began 7 p.m. 2nd; ended 11 a.m. 3rd. Measured in 10' diameter circular concrete tank 24" deep. Exposure good. Total 17.3

Galveston, Lat. 29° 14' Long. 94° 55'. Rain began 7 p.m. 2nd; ended 11 a.m. 3rd. Measured in bottle type fruit jar, overflowed. 2 1/2" dia., top 1 1/2" - 3 1/2 dia., bottom 6 1/2". Exposure good. Total 14.5+

Hempstead, Lat. 30° 06' Long. 96° 05'. Rain measured on 2nd and 3rd. Measured in 5 1/2" glass gage. Exposure good. Total 7.5

Mauriceville, Lat. 30° 11' Long. 93° 55'. Rain began 9:30 p.m. 2nd; ended 8 a.m. 3rd. Measured in oil barrel, straight. Exposure good. Total 7.0

Mayflower, Lat. 31° 06' Long. 93° 44'. Rain began a.m. 2nd; ended on 3rd. Measured in pot 18" dia., 10 gal., 9 gal. caught. Exposure good. Total 8.1

Milam, Lat. 31° 30' Long. 93° 50'. Rain began and ended on 2nd and 3rd. Measured in straight sided oil can. Exposure good. Total 9.9

Newton, Lat. 30° 46' Long. 93° 49'. Rain began p.m. 2nd; ended dna (6 a.m.) 3rd. Measured in tub 10 1/2" deep - 20 3/4" dia. bottom and 24 1/8" dia. top. Exposure good. Total 7.1+

Newton, Lat. 30° 49' Long. 93° 43'. Rained on 2nd and 3rd, measured on 3rd in a.m. Measured in can (oil) 12 1/2" dia. and 16" deep. Exposure good. Total 7.5

Newton, Lat. 30° 51' Long. 93° 46'. Rain began on 1st; ended 3rd. Measured in bucket, 11" x 8" dia. x 8 1/2" deep. Exposure good. Total 6.2

Orange, Lat. 30° 17' Long. 93° 47'. Rain began 7 p.m. 2nd; ended 6:30 a.m. 3rd. Measured in container 7 1/2" deep, x 5" dia. Exposure good. Total 7.3

Sabine Pass, Lat. 29° 45' Long. 93° 56'. Rain began dnp 2nd; ended 9 a.m. 3rd. Measured in can 8" straight. Exposure good. Total 4.5

Shelbyville, Lat. 31° 38' Long. 93° 59'. Rained on 2nd and 3rd. Measured in 10 quart straight well bucket. Exposure good. Total 4.5

Silsbee, Lat. 30° 19' Long. 94° 11'. Rain began p.m. 2nd; ended 7 a.m. Measured in grapefruit juice can, 7" deep. Exposure good. Total 6.6

Voth, Lat. 30° 10' Long. 94° 11'. Rain began on 2nd; ended a.m. 3rd. Measured in straight bucket, 8" high. Exposure good. Total 4.3

Zavalla, Lat. 31° 13' Long. 94° 17'. Rained on 1st, 2nd, and 3rd. Measured in bucket, dia. 11" x 8" x 8 1/2". Exposure good. Total 6.2+

his issue contains additional precipitation data for the storm of June 2-3 on page 168.

REFERENCE NOTES

he four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers ithin a state. Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the postoffice. Observation imes given in the Station Index are in local standard time.

elayed data and corrections will be carried only in the June and December issues of this bulletin. Monthly and seasonal snowfall for the preceding 12 months ill be carried in the June issue of this bulletin.

tations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

nless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in iles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

leet and hail were included in snowfall averages in Table 1, beginning with July 1948.

mounts in Table 4 are from recording gages. Traces are not shown. Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

ata in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time. Snow n ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830.

- No record in Tables 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
e Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR This entry in time of observation column in Station Index means after rain.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for dqtailed daily record.
R Station equipped with recording gage only.
T Trace, an amount too small to measure.
V Includes total for previous month.
Z Hourly amounts from a recording gage at the same site may be found in Table 4.
SS This entry in time of observation column in Station Index means observation made near sunset.

ubscription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and oney orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the eather Records Processing Center, 811 Fidelity Building, Kansas City 6, Missouri.

W.B.O., Kansas City, Mo. -- 8-28-50 -- 1940

CORRECTIONS

March 1950, Bushland and Chancellor, Table 4, delete dashes on 1st and 31st. These Stations had no precipitation during March.

May 1950, Dilley, Table 6, 31st evaporation should be .22 and wind 19. Total evaporation should be 8.55B and total wind 1143.

San Benito, Delete all entries and see delayed data for correct record.

Sterling City 6 NE, 31st, delete dashes and see delayed data for additional precipitation.

June 1950, Hereford 2, Table 4, delete 3rd and 15th and see delayed data for additional precipitation.

JULY 1950

Volume LV No. 7

KANSAS CITY: 1950

TEXAS - JULY, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during July averaged above normal over the extreme southern portion of the State, but were below normal elsewhere. Precipitation was below normal over the southwestern and extreme southern portions of the State and along the immediate coast, but was considerably above normal in most other sections. While many localities in the northwestern and extreme western portions of the State were reporting near-record amounts of rain for July, stations in the extreme southern portions were reporting unusually dry conditions for the month.

At the beginning of the month, cool weather prevailed in the northwest third of the State, but warm, humid weather prevailed elsewhere. Showers were general in the Red River valley, but scattered elsewhere. Most stations recorded their monthly minimum temperatures on the 1st. From the 11th to the 17th, effective rains occurred in most sections, except the lower Rio Grande Valley. Minor flooding resulted in the northeast part of El Paso on the 11th from heavy thundershowers in the mountains nearby. The lowest temperature for the month was 48° at Mount Locke on the 17th. For the balance of the month, effective rains fell in the Red River valley, the Panhandle, and the Trans-Pecos sections, but it continued dry in the central and southern areas. Locally heavy rains on the 26th and 27th brought minor flooding to Dallas and Rockwall in the upper Trinity basin. The greatest precipitation in 24 hours was 7.65 inches at Boyd on the 27th. The highest temperature for the month was 103° at Llano on the 30th, although most stations recorded their maximum temperature for the month on the 9th. The temperature range within the State for July was 60°. The greatest monthly precipitation was 16.35 inches at Lake Kickapoo.

Field work was interrupted in the northwest portion and was at a standstill most of the month in many northwestern and northern counties. In other areas, field work was resumed after the 17th. Wheat harvest was nearly completed, but some uncut fields had to be abandoned because of heavy weed growth. Grain sorghums benefited from rains in the northern High Plains, and harvesting of grain sorghums neared completion in the Lower Valley. Cotton continued fruiting in most areas with harvest active in the Lower Valley and in the Coastal Bend. A good corn crop was assured in practically all areas. Cantaloups and watermelons were available in volume over a wide area of the State. Transplanting of fall-crop vegetables in the Laredo, Winter Garden, and Eagle Pass sections made good progress. In the west, northwest, and north, range and pasture grass continued to make a lush growth as the unusually heavy rains continued in those areas.

LOCAL STORMS

A hailstorm destroyed 25,000 acres of cotton and 15,000 acres of feed crops in western Hall County near Memphis on the 16th, leaving damage estimated at $1,500,000. At Plains, Yoakum County, on the 17th, hail damaged cotton estimated at $500 and lightning killed one horse and two cows valued at $500. On the 20th, a wind and hailstorm damaged crops estimated at $5,000 at Vega, Oldham County. The hail was in a strip two miles wide by 12 miles long, and accounted for $3,000 of the damage, with the other $2,000 due to wind.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the postoffice.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

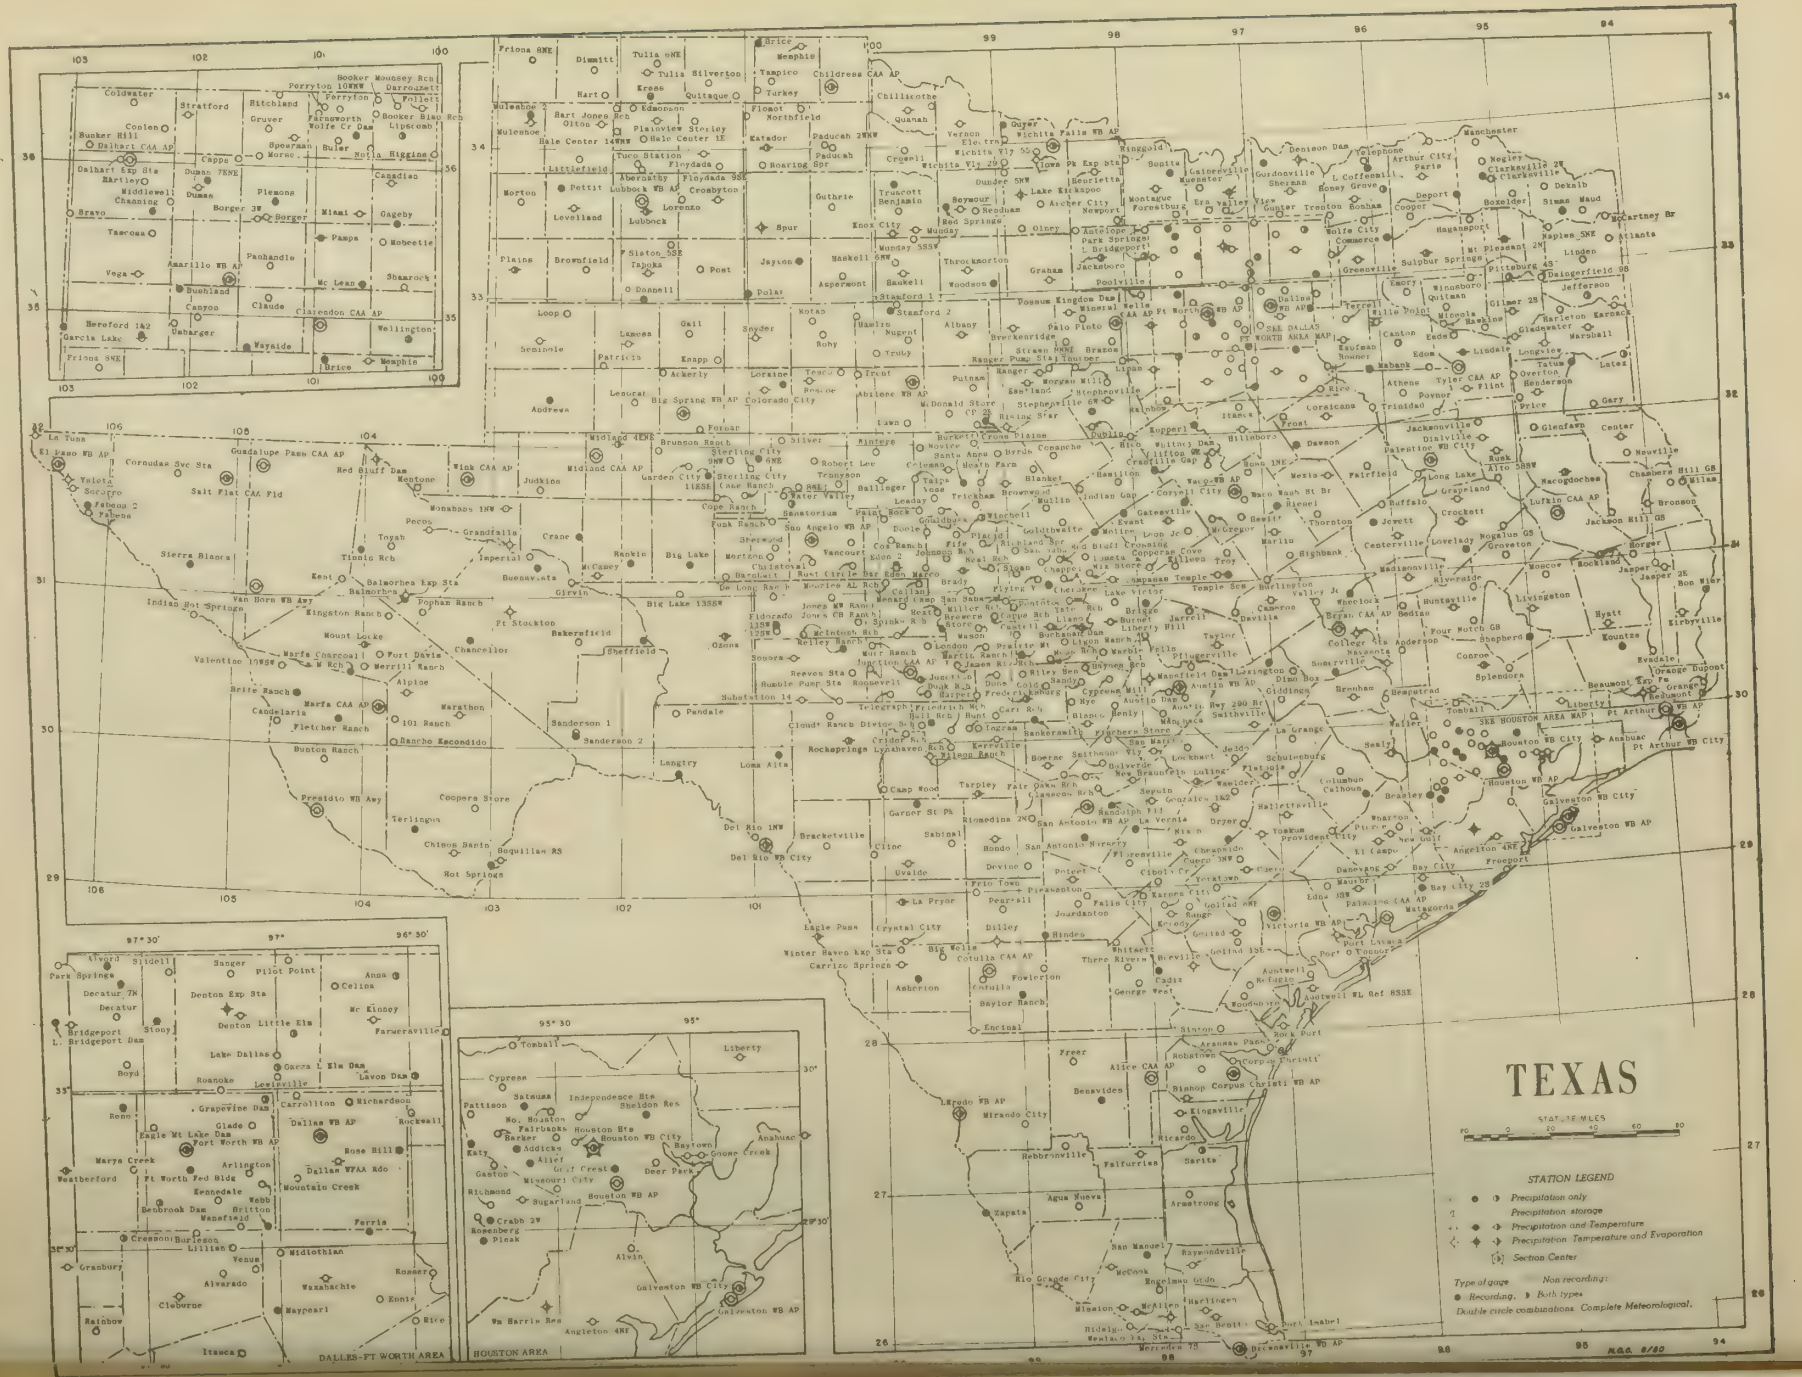
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 C.S.T.

-	No record in Tables 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 811 Fidelity Building, Kansas City 6, Missouri.

TEXAS

DEC 14

AUGUST 1950
Volume LV No. 8

KANSAS CITY: 1950

TEXAS - AUGUST, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during August averaged above normal in coastal, southwestern, and extreme western portions of the State, but were below normal elsewhere. Precipitation was above normal in the Panhandle and South Plains and in northeastern and local areas of southwestern Texas, but was considerably below normal in other sections.

At the beginning of the month, mid-summer heat prevailed in all sections and showers were general in the northern third of the State. Minor local flooding occurred in the upper Sabine basin near Mineola from heavy showers the last three days of July. The greatest precipitation in 24 hours was 5.85 inches at Lake Kickapoo on the 1st. Most stations recorded the maximum temperature for the month on the 4th or 5th. The highest temperature for the month was 108° at Llano and Rio Grande City on the 4th and 5th. Heavy local rains fell in a small area from Kerrville to Victoria on the 12th and 13th. A high pressure area predominated the weather in Texas from the 19th to 21st, bringing the lowest temperature for the month to many stations in the Panhandle and in northern counties. The lowest temperature for the month was 47° at Follett on the 20th. Showers continued in the north and northwest with heavy local rains in northern counties near the end of the month. Coastal areas and the extreme south continued critically dry. Most stations recorded the lowest temperature for the month on the 31st due to the inflow of colder air from the north in connection with a tropical storm that ran inland in the middle Gulf states of Louisiana, Mississippi, and Alabama. The greatest monthly precipitation was 11.46 inches at Gainesville. The temperature range within the State for August was 61 degrees.

Harvesting of cotton, sorghums, and corn made rapid progress under hot dry weather conditions in practically all areas where the crops are maturing. Preparation of wheat land was about completed in northwestern and High Plains counties and a limited acreage was seeded. Field work was interrupted by heavy rains across the northern part of the State and in the northern Panhandle. Central Plateau and scattered west Texas counties also received effective showers. Extremely dry conditions in central, southern and southeastern areas, however, continued unbroken and some northwestern and High Plains counties also were needing rain. Early planted fall vegetable crops in the Laredo, Winter Garden and Eagle Pass irrigated sections continued to make usual progress for this period of the growing season. Panhandle potato harvest was completed. Livestock on northern and western ranges continued in good condition although some of the western range counties were getting dry.

LOCAL STORMS

A hailstorm at Wichita Falls on the 21st caused $500 damage to automobile windshields. On the 22nd at Quanah, a hailstorm damaged 500 bales of cotton and killed 30 head of cattle; also cars were badly damaged; crop damage amounted to $75,000 and property damage at $8,000. Also on the 22nd, lightning fired an oil tank near Fort Worth with damage amounting to $200,000. Lightning also struck three houses in Dallas on the 22nd with damage estimated at $8,500. On the 27th, wind caused $10,000 damage at Playland Park, 6 miles SSW of the business area in Houston. On the 28th, a severe hailstorm occurred near Perryton but no estimate of damages was obtainable.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.
